

Approach 2 in full — both apps on ROS2, bridge to the rest of AIS

Same diagram as FIG.7 in the flow-diagram artifact — rendered by mermaid.js itself, not redrawn in CSS, so it matches exactly.

WHAT EACH PIECE IS

- **JobMgrNode / WeighAppNode** Same business logic as today, ported with the transport-only-swap approach — files that never touched SCS stay unchanged.
- **ROS2 Bridge (cpm_scs_bridge)** An AIS task with an embedded ROS2 node, translating every channel that still has an AIS-side counterpart — 13 of JobMgr's 16 channels once WeighApp also moves.
- **Apps that talk to JobMgr/WeighApp** Unchanged binaries — they keep calling the same SCS channel names; the bridge is invisible to them.
- **Unaffected apps** No source-level reference to either app's channels found — verified by direct grep, not assumed.
